

Customer Piping Notification

Natural Gas Piping

Morehead Utility Plant Board is committed to ensuring that the natural gas lines to your home or business remain safe and reliable. Morehead Utility Plant Board owns, operates and maintains the natural gas pipeline and facilities leading up to and including the meter of all residential and commercial customers. This maintenance includes regular inspections to ensure no leaks are present and the lines are in good condition.

You own and are responsible for all buried and above ground natural gas piping on your property that runs from the meter to the structure and other outside gas appliances as well as all piping within the structure. This is referred to as “customer piping” and must be maintained by you, the customer. If the customer piping is not properly maintained, corrosion and leaks can occur creating a hazardous condition.

To keep your home or business safe, you should monitor and properly maintain the natural gas lines that you own. Your customer piping should periodically be inspected for leaks. If the piping is metallic, it should also be inspected for corrosion. A licensed plumber or qualified technician can assist you with the inspection and maintenance of your customer piping. Any unsafe condition that is discovered should be repaired immediately.

If excavation is required, remember to call 811, the national call-before-you-dig number, to ensure that buried lines are located and marked prior to digging. When excavation is near a buried pipeline, the excavator is required to hand dig to avoid damage to the underground piping.

Morehead Utility Plant Board is committed to the safe and reliable delivery of natural gas to your home or business. Please feel free to call Morehead Utility Plant Board if you have any questions or need any additional information concerning your customer piping. Contact: Morehead Utility Plant Board 606-784-5538

Water Service Piping ownership

Water Service Line – Ownership and Responsibility

A water service is the piping that transports water from the MUPB water main to an individual property. The portion of the service line from the water main to outlet side of the water meter box is the responsibility of MUPB. The portion from the outlet side of the meter box to the rest of the premise plumbing is the property owners' responsibility for maintaining and repairing.

Línea de servicio de agua: propiedad y responsabilidad

Un servicio de agua es la tubería que transporta agua desde la red principal de MUPB hasta una propiedad individual. La parte de la línea de servicio desde la red principal de agua hasta el lado de salida de la caja del medidor de agua es responsabilidad de MUPB. La parte desde el lado de salida de la caja del medidor hasta el resto de la plomería de la propiedad es responsabilidad de los propietarios de la propiedad para su mantenimiento y reparación.
